

E-IDS v2 — Contractor Manual

Electronic Inspection Defect System (E-IDS v2) *Operational Manual for Contractors*

Updated 2026-08-06. This is the short, Contractor-focused edition of the E-IDS v2 User Manual. Your role is deliberately narrow — this covers everything you'll actually see and do.

The sign-in screen every role shares — your login routes you straight to your own defect list.

1. What Is E-IDS?

E-IDS v2 is the digital system a project's Inspector uses to run a building defect inspection under **CIS 7:2021**. When the Inspector finds a defect, it's logged in the system and — once flagged to you — appears in your account for repair. You don't register projects, run inspections, or see scores; your whole job is closing out defects on the project(s) you're assigned to.

2. Your Role

- ❑ **You (Contractor).** Your login opens directly to **My Defects** — there's no Dashboard, Projects list, or Reports link, because there's nothing for you to do there. Your job is: get notified about a defect, mark it in progress, mark it settled once fixed (which notifies the Inspector to come check), and repeat.
- ❑ **Inspector.** Finds the defect on site, explicitly notifies you about it, and — after you mark it settled — reinspects and either confirms it resolved or sends it back to you if the fix doesn't hold up.
- ❑ **Admin.** Assigned you to the project in the first place and can also notify you about defects if the Inspector doesn't.

⚠ **Important** You can never mark your own repair as fully **RESOLVED**. That confirmation always comes from the Inspector or Admin — it's not a restriction on trust, it's what makes the final sign-off meaningful for everyone who relies on this record.

What You Can and Can't Do

Action / Capability	You (Contractor)
View Dashboard, Projects & Reports	✗
View My Defects (your assigned project's defects)	✓
Create / Manually Log a Defect	✗
Mark Defect IN_PROGRESS ("Start Repair")	✓
Mark IN_PROGRESS → PENDING_VERIFICATION ("Mark Settled")	✓
Confirm RESOLVED or reject a repair	✗ (Inspector/Admin only)
Everything else (projects, scoring, settings)	✗

3. Defect Lifecycle & Status Workflow

1. ☐ **OPEN** — a defect has been logged and, once the Inspector or Admin clicks **Notify Contractor**, it's flagged in your list with severity, location, component, and any photo evidence.
2. ☐ **IN_PROGRESS** — you click **Start Repair** once work begins on site.
3. ☐ **PENDING_VERIFICATION** — you click **Mark Settled** once the repair is complete. A confirmation modal tells you this will notify the Inspector to reinspect — confirm it. From here you'll see a read-only "Awaiting Verification" badge; there's nothing more to do until the Inspector checks it.
4. ☐ **RESOLVED** — the Inspector confirms the fix on site. If they instead click **Reject – Not Fixed**, the defect comes back to you as **IN_PROGRESS** — repair it properly and mark it settled again.

DEFECT / LOCATION	PROJECT	SEVERITY	STATUS	ACTIONS
Ceiling (Siling) Living Room FAIL on A3_CEILING (Ceiling (Siling)) at Living Room.	PRJ-2024-003 Kota Laksamana Heights	Low	Resolved	Reopen
Internal Fixtures Service Area FAIL on A6_FIXTURES (Internal Fixtures) at Service...	PRJ-2024-003 Kota Laksamana Heights	Low	Resolved	Reopen
Door (Pintu) Living Room FAIL on A4_DOOR (Door (Pintu)) at Living Room.	PRJ-2024-002 Desa Aman Villa	Low	Open	Start Repair
Roof (Bumbung) Roof (Bumbung) - Section 1 FAIL on A7_ROOF (Roof (Bumbung)) at Roof...	PRJ-2024-001 Taman Merlimau Perdana	Medium	Resolved	Reopen
Internal Wall (Dinding Dalam) Living Room FAIL on A2_WALL (Internal Wall (Dinding Dalam)) at...	PRJ-2024-001 Taman Merlimau Perdana	Medium	Open	Start Repair
Window (Tingkap) Living Room FAIL on A5_WINDOW (Window (Tingkap)) at Living...	PRJ-2024-001 Taman Merlimau Perdana	Low	In Progress	Mark Settled
Floor (Lantai) 	PRJ-2024-001		Pending	Confirm Resolved Reject - Not Fixed

You see this same lifecycle from your scoped "My Defects" view — the action button always matches whoever's turn it is.

4. Step-by-Step: Your Workflow

A. Log in and find your defects

- Log in — you land directly on **My Defects**, scoped to the project(s) you're assigned to.
- Defects the Inspector or Admin has explicitly flagged via **Notify Contractor** show up in a banner at the top ("N defect(s) flagged for your action") — start there. The full list below also shows everything on your projects regardless of notification state.

B. Work each defect through to settlement

- Click **Start Repair** on an `OPEN` defect once work begins on site — it moves to `IN_PROGRESS`.
- Once the repair is physically done, click **Mark Settled**. Confirm the modal — this notifies the Inspector that the defect is ready for reinspection — and it moves to `PENDING_VERIFICATION`.
- You'll see a read-only "Awaiting Verification" badge — wait for the Inspector to check it.
- If rejected, it returns to you as `IN_PROGRESS` — fix it properly and repeat from step 2. You'll never be asked (or able) to mark it `RESOLVED` yourself.

5. Demo / Testing Accounts

Role	Account	Password	Scope
Contractor	contractor.a@eids.gov.my	password	Assigned to Project 1 only
Contractor	contractor.b@eids.gov.my	password	Assigned to Project 2 and Project 3

Log in as `contractor.a@eids.gov.my` and you'll see defects across all four lifecycle states on Project 1 — a good way to try **Start Repair** and **Mark Settled** yourself before going live.
